MongoDB Compass connect string to your Atlas server

```
'mongodb+srv://tpawlow1:SXAbgKn0FxbPStR5@nbda-project3.ctkvdvi.mongodb.net
/nbda-project3?retryWrites=true&w=majority'
```

Explanation of additional features.

No Additional Features.

Explanation of status, stopping point, and issues if incomplete.

With the time provided, this is mostly complete to the best of my ability. The only incomplete area of this application would be the user interface. While not abysmal, it is definitely not in the best shape that it could be. I plan to work on this aspect of the application before project 5 is due.

Discuss the easy and challenging parts of the assignment. How did you overcome all or some of the challenges?

Some of the easier aspects of the project were implementing the systems in the first place. Due to the objectives of previous projects in the class, translating the main points to my own application was not a difficult task.

No major difficulties were encountered during this project, except for working out minor kinks and errors during adaptation to my own application.
